

Jasper Mountain Decision Memo Errata Sheet

This document includes errata documentation and correction for the Jasper Mountain Project Decision Memo (DM)(PF Doc. NEPA-01a, 5/18/15). The DM was signed May 18, 2015 and emailed and mailed to parties that participated in developing the project and/or submitted comments to the process. Pursuant to FSH 1909.15 Chapter 18, this errata sheet documents simple corrections to the DM. The errata reported below remain within the scope and range of effects considered in the original analysis (DM and specialist reports). The error corrections do not result in a new or significant impact on the human environment and did not change the analysis or conclusions of the DM.

DM Page	Original	Correction	Information	Date
11	Streamside buffers adjacent to harvest areas would be used to protect water quality and aquatic dependent species and their habitats as prescribed by the Inland Native Fish Strategy (Appendix D of the 2015 Revised Forest Plan). Buffers would be 300 feet wide around all fish-bearing streams, 150 feet around all permanently flowing nonfish-bearing streams, and 75 feet around all seasonally flowing or intermittent streams.	Streamside buffers adjacent to harvest areas would be used to protect water quality and aquatic dependent species and their habitats as prescribed by the Inland Native Fish Strategy (Appendix D of the 2015 Revised Forest Plan). Buffers would be 300 feet wide around all fish-bearing streams, 150 feet around all permanently flowing nonfish-bearing streams, and 100 feet around all seasonally flowing or intermittent streams.	The Aquatic Specialist Report (PF Docs. AQ-01 and SR-04a) on p. 3 also contained the erroneous statement found in the "Original" column and should have reflected the statement found in the "Correction" column, although the correct information was referenced on p. 19.	5/21/15
